MERIDIAN

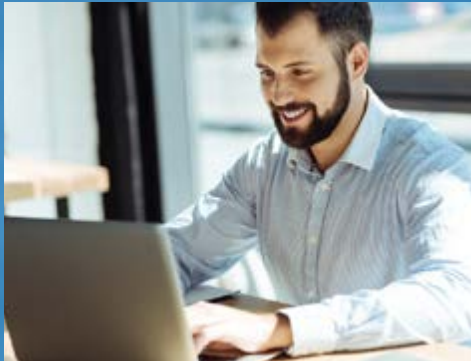

Empowering the Asset Lifecycle

Transforming engineering data into actionable plant information, keeping users in control, compliant, aligned, and informed throughout the asset lifecycle.

Meridian is Asset Lifecycle Information Management software that connects maintenance and engineering, supports concurrent engineering, and improves data handover. Unlike departmental point solutions that are restricted in scope, Meridian provides a comprehensive solution for managing concurrent plant modifications of all scales, and maintaining as-built master data for operations and maintenance. Work with information in the cloud or on premise, at your desktop or on the go with your mobile device, within your organization or with external contractors and stakeholders.

 EmpoweringTheAssetLifecycle.com

IN CONTROL

By creating a 'single source of truth' that centralizes information to avoid costly rework, delays, accidents, and unplanned downtime

COMPLIANT

By maintaining data integrity for reduced risk, and proof of control for easy audits

ALIGNED

By empowering collaboration that connects your enterprise, including managing concurrent engineering, external contractors, and data handover

INFORMED

By leveraging reports and dashboards to analyze performance and make better decisions

Meridian is available as a cloud service and on premise server. There are distinct advantages to each and you have the flexibility to implement either configuration to suit your organization's needs. All Meridian Clients and Meridian Extensions work with both platforms.

Meridian Platforms are the heart of your Asset Lifecycle Information Management solution.

MERIDIAN CLOUD

Empower your asset information with the speed, agility, and affordability of Meridian as a secure cloud service. Built on Microsoft Azure, Meridian Cloud provides certified secure cloud services with maximum reliability and global availability. Getting started is fast and easy with built-in industry best practices for data standards and workflows. Save money by dramatically reducing local IT and implementation expenses, and shifting budgets from CAPEX to OPEX.

UNIQUE ADVANTAGES:

- Global Access
- Speed of Start
- Always up to date
- Offload IT Burden
- OpEx vs. CapEx
- Certified Secure
- Service Level Assurance

MERIDIAN SERVER

Enrich your asset information platform with advanced capabilities and integrations through this on premise server. Integrations with other critical business systems increase interoperability and enhance efficiency. Support for advanced information types such as 3D CAD and BIM integration, as well as auditable workflows with e-signatures are available to meet the requirements of a wide range of highly regulated industries.

- Local Access and Control
- Work 'Off the Grid' on local networks
- Highly Configurable
- Integrations to Enterprise Asset Management (EAM) systems:
IBM Maximo, SAP EAM, Infor
- Integrations to Enterprise Resource Planning (ERP) systems:
SAP, Oracle, Microsoft Dynamics AX
- Integrations to Enterprise Content Management Systems
- Integrations to Office applications: Microsoft Office
- Integrations to CAD authoring applications:
AutoCAD family, MicroStation, Inventor, SolidWorks, Revit,
and DWG-based CAD applications
- Comprehensive e-signatures
